Full Service Lawn Care Program

Action Lawn Care understands the importance of quality lawn maintenance. With North Carolina's unpredictable weather conditions, you need someone you can trust to take care of your lawn like their own; from fertilizing, to weed control, lawn disease treatments, lime applications, to specialized seasonal treatments and maintenance, you can expect a rich and lustrous lawn without lifting a green thumb. The only additional requirement is water.

- **Application One – *Late February through Early March***
Our first visit promotes early spring green-up and weed control. Application consists of a complete lawn fertilizer, pre-emerge crabgrass control, and broadleaf annual weed control.
- **Application Two – *Late April through Early May***
The second visit will improve the color as well as density. Application consists of a complete lawn fertilizer and an application of Pre-emergent weed control for annual weeds such as spotted spurge and crabgrass.
- **Application Three – *May through June***
This treatment contains slow release lawn fertilizer and a post-emerge weed control. The entire lawn is blanket sprayed to eliminate weeds. This application maintains color throughout the summer and provides consistent growth of cool season grasses.
- **Application Four – *August through September***
Lime is critical in Carolina to improve soils as well as balance acidity. This application consists of a lime application as well as additional blanket spraying of lawn for weed control before aeration.
- **Application Five (Aeration, Fertilization & Overseeding) – *September through Middle of October***
This process includes aeration of the soil and overseeding with fescue seeds and applying a high quality starter fertilizer. This will replenish the bare areas and reestablish good absorption of nutrients and water.
- **Application Six – *November through December***
Fertilization and blanket spraying the lawn for weed control to clean up the lawn before winter. This helps control winter annuals before spring allowing the turf fill in early in the spring.
- **Mowing Service - *March – end of October (weekly) and then November through December (bi-weekly)***
- **Leaf Removal Service – *November through December (bi-weekly on the same mow date)***

Turf Development Program

Our Turf Development Lawn Care Program is the best and complete lawn care program for North Carolina's cool season lawns such as fescue. Lawn Care treatments pertaining to fertilization, pre-emergent and post-emergent weed control of the lawn and off-grass areas as well and lime for balancing the pH of the soil.

- **Application One – Late February through Early March**
Our first visit promotes early spring green-up and weed control. Application consists of a complete lawn fertilizer, pre-emerge crabgrass control, and broadleaf annual weed control.

- **Application Five (Aeration, Fertilization & Overseeding) – September through Middle of October**
This process includes aeration of the soil and overseeding with fescue seeds and applying a high quality starter fertilizer. This will replenish the bare areas and reestablish good absorption of nutrients and water.
- **Application Six – November through December**
Fertilization and blanket spraying the lawn for weed control to clean up the lawn before winter. This helps control winter annuals before spring allowing the turf fill in early in the spring.

Options to either Program (not included unless specifically requested)

- **Bermuda Suppression (4) – June through September**
These **four** treatments, over a two year period, will eradicate up to 98% of Bermuda in fescue lawns.
- **Fungicide Prevention (3) – late May through August**
These three summer treatments control lawn diseases such as brown patch and dollar spot. They are scheduled every thirty days and keep the lawn healthy all summer.
